

PRESS RELEASE

JOINED TECHNOLOGIES FOR POLYURETHANE-INSULATED PIPES PRODUCTION LINE

During Plast Exhibition in Milan, SAIP will be guest at AMUT GROUP's booth to seal **the recent technical collaboration in manufacturing lines for the production of PIPE IN PIPE technology.**

Multi-year experience, and high professional skills and their unique ability to innovate represent the common strengths of both companies, the key in offering a product of exclusive quality.

A great occasion to present **an integrated offer at high value-added.**

Since 1978, SAIP is one of the worldwide leading companies in the designing and manufacturing of polyurethane processing equipment. AMUT is an Italian manufacturer of extrusion lines since 1958. Together they offer their customers an innovative technology in the production of flexible polyurethane pipes, according to the requirement of the international certifications standard.

Applications: Heating / Cooling

Line Main Features:

- Best thermal resistance property
- Composite system as constructive element
- Simple installation
- Various application fields
- Low moulded density
- Low thermal conductivity
- "Diffusion-tight" foil possible
- High productivity
- Low manpower required

During Plast Exhibiton, from the 5th to the 8th of May, SAIP will be holding an Open House to give to the customers the possibility of visiting the company, seeing several lines in operation, machines for different applications, discovering the latest solutions developed.

Come and visit us at Plast: Hall 13, booth B71 / C72.
