

NEW BLOWN FILM COEX LINE IN LIVE DEMO AT AMUT DOLCI BIELLONI PERMANENT SHOW ROOM

We inform all our customers that a **NEW 2 METERS 3 LAYERS COEX LINE** will be shown in operation in the second half of April.

This new line includes some new important features such as:

- **a new cooling system;**
- **a new screw profile, designed to achieve a very tight thickness tolerance (less than +/- 2%).**

The market is more and more demanding and a tighter thickness tolerance means:

- more meters on a roll
- Higher speed when printing
- Better quality when laminating
- Better mechanical properties when producing shrink film.

This new line is part of a new generation of **3 layer and 5 layer lines** that our Company is introducing in the market for top quality films.

We will show you our full range of machinery available in our Show Room including our **10 colour Telia gearless flexo press**.

YOU ARE INVITED TO COME!
