

THE NEW “ALL-IN-ONE” 1500 mm STRETCH FILM LINE

During the next international Plast show in Milano (5 to 9 May) we will show in operation a new stretch film line that includes the **“Multiwind” winder for the production of jumbo, machine and hand rolls.**

The line on display will be a 5-layer line designed for an output of 1050 kg/hour (net output wound on rolls).

The Multiwind winder can easily run at speeds of over 600 m/min and can work on both 3” and 2” cores. The cores are automatically loaded.

All the winder and tension controls are based on servodrives.

The chill roll is a jumbo chill roll 1500 mm diameter and includes fully automatic lubrication and secondary chill roll.

The chill roll is manufactured according to the long experience of the Group on C.I. cylinders for the flexo market.

The automatic die is manufactured by E.D.I., a top international brand in the market.

The extrusion section is based on a new 130 mm L/D 34 extruder and three 55 mm extruders.
